

MUHAMMAD AQID BIN ISHAK

Shah Alam | aqidishak28@gmail.com | +6013 374 0451 |

SUMMARY

Security-focused IT Engineer with hands-on experience in cloud security, backend systems and IoT platforms. Experienced in implementing secure development practices, managing infrastructure and supporting system integration for real-world deployments. Currently leading software-related delivery for EV charging projects, including OCPP backend, charging platform and requirement validation, while also developing public charging systems end-to-end (backend, mobile app and device integration).

Strong interest in cybersecurity roles, particularly in cloud security, system security and secure architecture, with practical exposure to AWS security controls, infrastructure setup (VPS, domains) and access management. AWS Certified Cloud Practitioner with a goal to transition into security-focused engineering roles.

WORK EXPERIENCE

IT Engineer Executive

May 2025 - Present

C-Zero Sdn Bhd (Shah Alam)

Perodua Smart AC Home Charger

- Serve as the primary technical and software liaison for the Perodua EV charging project, bridging communications between stakeholders and technical milestones to ensure the project stays on schedule.
- Ensure the software solution meets functional and integration requirements defined by stakeholders.
- Validate system behaviour covering charger, backend system and mobile application integration.
- Created and maintained end-to-end Standard Operating Procedures (SOP) for the Perodua project covering the full operational lifecycle from charger receiving at C-Zero, site preparation, installation workflow at customer homes, commissioning, handover, and post-installation customer support processes.
- Support Perodua-related technical discussions from the software and system architecture perspective.

Public Charging Project

- Design and develop charger firmware logic and telemetry pipelines for public charging environments.
- Develop and maintain OCPP backend and charger communication services using Java and Python.
- Design and develop monitoring and management systems for public charging operations (charger status, charging sessions and telemetry data).
- Develop full backend system including APIs, charger management, session tracking and reporting.
- Integrate chargers, backend services and mobile applications into a complete end-to-end public charging platform.

Cloud Security Intern

Oct 2024 - March 2025

Bank Islam Malaysia Berhad (Kuala Lumpur)

- Implemented automated security repository secret scanning using TruffleHog.
- Assisted in Infrastructure as Code deployment using Terraform integrated with Fortanix Data Security Manager.
- Supported AWS security compliance based on CIS AWS Benchmark v1.4.
- Contributed to improving cloud security posture and automation workflows.

Robotics Trainer – (Part-time)

June 2025 - Present

NextGenMakers (Shah Alam)

- Conduct robotics and programming classes for students aged 7 to 15.
- Teach hands-on robotics development using Arduino (C/C++) and common microcontroller platforms.
- Guide students in building and programming robots using multiple input and output devices.
- Hands-on teaching and integration of hardware modules including LCD display, servo motor, ultrasonic sensor, PIR motion sensor and soil moisture sensor.
- Introduce basic electronics, sensors, actuators and logical programming concepts through project-based learning.

EDUCATION

- Bachelor of Computer Science (Hons.) Netcentric Computing**
UiTM Jasin Melaka
 - CGPA: 3.09, Relevant Courses: Data Structures, Web Dev, Information and Network Security

Oct 2022 - Aug 2024
- Diploma in Computer science**
UiTM Raub Pahang
 - CGPA: 3.44 , Relevant Courses: Algorithm and Development design Structures, Object Oriented programming, Fundamental of computer security

Oct 2019 - Feb 2022
- Malaysian University English Test**
 - Band: 3.5

July 2019

SKILLS

- Full-Stack Dev**

Python (Django/Flask), JavaScript (React.js, Node.js), PHP (Laravel), Dart (Flutter), Tailwind CSS, RESTful APIs
- IoT & Hardware**

ESP32/Arduino Firmware, OCPP 1.6/2.0 Protocols, Circuit Design (Control Pilot/CCS2), Sensor Integration
- DevOps & Infra**

Nginx, Docker, Linux Server Management (Shinjiru), Domain & SSL (DNS, WHM/cPanel), Git, Terraform
- Cloud Platforms**

AWS (EC2, Cloud Monitoring), Google Cloud Platform (GCP)
- Databases**

PostgreSQL, MySQL, Firebase, Database Schema Design & Optimization
- Core Strengths**

Critical Thinking, team work, collaboration, technical troubleshooting, System Architecture, Rapid Prototyping to Deployment
- Language**

Malay (Native), English (intermediate)

CERTIFICATES

- AWS Academy Cloud Foundations**
 - Completed a hands-on program covering troubleshooting, networking, system administration, and security fundamentals.

May 2024
